

LDAPCon 2015 CFP

Title

From the OpenLDAP to the Apache Directory Project

Type

15 Minute Short Talk

Abstract

Apache Fortress is an Open Source Identity and Access Management system that works well with both OpenLDAP and Apache Directory Servers. It also has been sponsored by both projects. First introduced in 2011 at LDAPCon and subsequently released by the OpenLDAP project. Later it moved to the Apache Directory as a sub-project. This talk will examine the changes, with respect to quality, functionality, process and community participation. It will take a sneak peek at roadmap, and provide insights to keep up with some of the changes occurring inside the directories.

Outline

1. History
2. Current Status
3. Roadmap
4. Future LDAP Technology Hurdles
 - client-side changes
 - server-side changes

Biography

System Architect at Symas. Member of the OpenLDAP Engineering Team. Apache Directory PMC.
